

## **Triton Manufacturing Services**

***THE one-stop destination for  
manufacturing innovation***

Flexibility is a vital part of a successful 21st century business. As modern communication and transportation systems shrink the world we live in and business becomes increasingly competitive, outsourcing is an option that provides businesses with additional opportunities to grow and prosper. It frees up resources that can be redeployed toward developing strengths and serving customers. All the better for a company's competitive edge.

Of course, one must establish creative, strategic partnerships when choosing a manufacturer to trust with their production. At Triton, we are equipped to understand your business environment, and know not only how to put a product together but also how to enable new direction. It's a concentration on both revenue generation and cost reduction.

## Who We Are

Located on the Gulf Coast shores for over thirty years, our manufacturing plant in Long Beach, Mississippi is staffed by over 250 of the best and brightest in the American South. Since our founding in 1979, Triton has long been known as an innovator. Our expertise over the last decade has been primarily focused on an array of financial self-service devices. In the early days of our company, we developed and built remarkable scientific equipment for demanding clients like Exxon, General Electric, Magnavox, and the U.S. Navy. They learned that Triton not only has the technological expertise to solve problems, but also has a rare passion for developing technology that makes sense — solutions that are as practical and affordable as they are sophisticated.

## Freedom

Outsourcing to Triton can relieve your company from burdensome responsibilities, such as:

- Investment in factory updates or automation
- Repetitive or unfamiliar tasks
- Maintaining staff levels in times of reduced demand
- Regulation compliance

Triton Manufacturing Services closes the gap between piece production and small batch/low volume production. The workflow organization can be a mixture of both - elements of jobbing or batch production.

## USA Direct Benefits

Trusting your production to so-called “low-cost countries” in Asia, South America or elsewhere can have significant hidden challenges:

- Language barriers
- Shipping and Tax issues
- Currency fluctuation
- Differences in business cultures and practices
- Unpredictable quality standards

These challenges are eliminated by choosing Triton, a full-function, domestic operation. There is a trust factor involved. You'll want the peace of mind knowing that you are dealing directly with the factory right here in the USA producing your product - not foreign middlemen or agents.

- **Manufacturing Services**
  - Assembly
    - Light fabrication
    - Sub-assembly
    - Whole-unit assembly
    - Kit building
    - Packaging
  - Configuration / Customization
  - Test, inspection, & validation
  - ISO 9001:2008 certification
  - Emphasis on Lean Manufacturing principles
  - Highly flexible, cross-trained workforce
  - Scalable workforce
  - Assemble-to-order or build-to-stock programs
- **Warehousing**
- **Parts Fulfillment**
- **Technical Support Services**
