Recommended Implementation is:	
<input type="checkbox"/>	Now for all affected units
<input type="checkbox"/>	All affected units during next service visit
<input checked="" type="checkbox"/>	<b>Optional</b>
<input type="checkbox"/>	No implementation required

### DESCRIPTION:

Triton announces the release of an update which allows an XScale or X2 ATM to communicate with hosts which use SecureTrust or Trustwave SSL certificates. The update enables SecureTrust and Trustwave certificates to be approved by the ATM in order to process transactions via SSL.

- ◆ The following load files are included with this release:
  - xt20cast1.0.0.tlf - For XScale
  - Xt30cast1.0.0.tfv - For X2 / Traverse / ARGO

No specific hardware is required for this software. It can be loaded on any XScale or X2 system. The ATM must be running application version 2.4.0 or greater.

**IMPORTANT:** When installing any update, the ATM restarts itself as part of the installation process. When installing this particular update for SSL certificate authorities, after the automatic restart, the unit **MUST** be manually restarted via management functions.

Please refer to the software release notes on the Triton website for additional information regarding the update.
