CONFIDENTIAL

SUBJECT:
ADVANCED SECURITY MODULE FOR 9100 ATMS

TECHNICAL BULLETIN: 16-08
DATE: SEPTEMBER 21, 2016

Available to all authorized Triton distributors and third party service providers.

OPTIONAL UPGRADE: TRITON ANNOUNCES THE RELEASE OF ADVANCED SECURITY MODULE (ASM) FOR 9100 ATMS WITH SDD OR MINI-MECH DISPENSERS

Triton previously released an ASM to improve the security of communications between the ATM and the cash dispenser. The security module in the cabinet or vault is synchronized to the main board of the ATM. Triton, in its ongoing efforts to ensure the security of your ATM fleet, is making available the ASM and updated software for all 9100 ATMs with Mini-Mech or SDD dispensers. **Triton strongly suggests that this hardware/software upgrade be installed on all of your machines.** All refurbished products are shipping with ASM. ATM security continues to evolve in order to try to stay one step ahead of criminals who view your ATMs as easy prey. In recent years, a number of sophisticated, global security breaches have occurred putting all ATMs at risk of compromise. You should regularly upgrade the security of your ATM fleet just as you do with your company servers and computers. **Both hardware and software must be updated for ASM.**
