Triton Systems Partners with Coinsquare to Bring Cryptocurrency to U.S. ATMs

February 3, 2020
Long Beach, MS

Coinsquare Networks Inc. (CNI) is an innovative fintech company whose software allows customers to buy Bitcoin from a traditional ATM in the U.S. using a debit card. By partnering with Triton and some of the world's leading ATM manufacturers, this solution integrates seamlessly with a customer's everyday ATM experience.

For ATM ISOs this means a new, high margin revenue stream that requires only a software update. If your fleet consists of Triton's RL2000, RL5000, RT2000, FT5000 or ARGO's, Triton Connect will be able to update your software to include Bitcoin capabilities without a technician having to visit the site.

Triton Connect is offered at no charge for the first two years to ATM operators who sign up with Coinsquare and don't currently have the technology installed on their fleets.

The software uses the existing ATM network and infrastructure to execute a transaction. After a customer inserts their debit card and enters their pin, the transaction is much like any other. The Bitcoin purchased will be delivered via a paper wallet which provides immediate access and ownership to the customer.

To date, Coinsquare's crypto solutions are available in 40 states and the District of Columbia. The next phase in the U.S. will allow customers to convert Bitcoin to cash using the ATM.
