Bulletin 21-01

Triton Announces End of Production for Traverse Unit

The Triton Traverse first launched in the US and Canada over a decade ago as a low-cost, off-premise solution for Independent ATM Deployers (IADs). The product was an immediate success.

Over the years, with the advent of new technologies, rising costs, and network / regulatory requirements in the ATM industry, the time has come to end production of new Traverse ATMs. We will continue to take orders for the remaining new Traverse units on a first-come, first-served basis until all remaining units are sold. Contact your sales or customer service representative for more details on the remaining configurations (sales@triton.com or 228-575-3100).

As with all discontinued products, Triton will continue to support the Traverse for the foreseeable future with replacement parts, component repairs, refurbishment services, and technical support.

Triton/ATMGurus will continue to accept Traverse units for trade credit and offer Certified Pre-Owned Traverse units for sale through our www.ATMGurus.com refurbishment department.
