BULLETIN 23/01

July 11, 2023

Triton 9100 T-10 / TR-31 Control Panel Upgrade Kit

At Triton, we are committed to supporting our customers' investment in their Triton ATMs for decades after purchase. This philosophy, along with overwhelming requests from customers, has resulted in the development of a 9100 Control Panel Upgrade Kit. This upgrade kit will allow owners of 9100 ATMs to support the upcoming TR-31 mandate, operating their Triton ATMs for many more years.

This kit will include a new 9100 control panel designed to support the T-10 (PCI 5/6) EPP, as well as the TR-31 mandate that will cut-in on January 1, 2025.

This will be a limited offering upgrade kit, so we are requesting any customers who are interested in securing their kits to reach out to Triton sales & customer service at 228-575-3100, or sales@triton.com.

In order to support the upgrade of your 9100s, we will need to know:

- 9100 quantities to upgrade
- Quantity of Blue vs. Bayou Bronze control panels
- % of 9100s that are EMV complaint
- Delivery timing

Kit availability will be limited to pre-orders only, in US configurations, and order priority will be based on dates POs are received.

Kits will be available beginning in early 2024. Don't wait. Contact us today to reserve your kits!

9100 with older EPP

9100 with T-10 EPP
